

OUTLAY · FOR MARYLAND HEALTH CONNECTION

AI spend, mapped to the work that drove it — and held to budget.

A read-only, metadata-only governance layer for the AI behind Maryland Health Connection.

THE MOMENT

Maryland is operationalizing its 2025 AI Enablement Strategy.

Right after “is it safe?” comes the question every CFO and CIO asks:

“What is the AI costing us — per program — and is it on budget?”

Today that lives in invoices and spreadsheets, after the money is spent. Outlay answers it continuously, attributed to the work.

WHAT OUTLAY DOES

Three things, from data you already have.

- **Attribute** — every AI dollar mapped to a team, work type, ticket, and engineer.
- **Forecast** — what planned work will cost, back-tested on your own delivered work.
- **Govern** — budgets per program, real-time pacing, and on-/off-track alerts.

HOW IT CONNECTS

- Read-only links to your tracker (Jira / GitHub / Linear) and your AI provider's usage & billing API.
- No agents installed. Nothing in the request path.

WHY THIS IS SAFE FOR A HEALTH EXCHANGE

We never see PHI, PII, or FTI — by design.

- **Metadata-only** — token counts, ticket IDs, work types, dollars. Never prompts or outputs.
- **Bring-your-own-key** — your API keys stay in your environment.
- **Read-only** — Outlay observes; never a proxy or gateway in any data path.

WHAT THAT MEANS FOR YOUR REVIEW

- None of the data MARS-E / ARC-AMPE, IRS Pub 1075, or HIPAA govern ever reaches us.
- The integration sits OUTSIDE that data scope — what stops most vendors at the door.

LIVE

Let's look at the product.

On sample data shaped like a real engineering program — the same screens you'd see on day one of a pilot.

DEMO · ATTRIBUTION

Every dollar, on the roadmap.

Spend by team and cost center, by work type, by ticket, by engineer — with the share that maps to a real work item shown honestly, and the cheapest way to lift it.

Showback today; the same data feeds chargeback and your FOCUS-aligned export.

DEMO · ACCURACY (THE HONESTY LAYER)

We don't ask you to trust a vendor benchmark.

Outlay back-tests its forecast on **your own closed tickets**, leave-one-out: hide a ticket, predict it from the rest, compare to actual cost.

You see the measured error on your data — and we never hide the sample size.

Put AI compute on a budget — per program.

- **Program budgets** spanning teams, projects, and work types.
- **Real-time pacing** — projected to breach, and the date.
- **Earned-value rating** — on track / watch / off track from forecast vs actual on completed work.

REACHES YOU PROACTIVELY

- Off-track programs surface in the weekly digest, the monthly close pack, Slack/Teams, and a webhook to your SIEM — not just in the dashboard.

Straight talk on where we are.

IN PLACE TODAY

- SSO (OIDC) + SCIM
- Phishing-resistant MFA (passkeys)
- RBAC · audit log → SIEM
- Retention + self-serve erasure
- Encryption at rest + KMS hook
- IR plan · WCAG 2.1 AA · CI security scan

ON THE ROADMAP (HONEST)

- SOC 2 Type II — in progress
- Annual pen test — scheduled
- StateRAMP / GovRAMP — roadmap
- FedRAMP cloud + FIPS crypto — deal-gated

Two ways this earns its place now.

THE AI-GOVERNANCE LAYER

- As you stand up the 2025 AI strategy, be the cost-attribution + budget-guardrail layer from day one — governance-first, like your program.

VENDOR & ENHANCEMENT SPEND

- As the Deloitte / J29 enhancement work adopts AI coding agents, see AI-assisted delivery cost per project — the earned-value view a public agency needs.

THE ASK

A two-week, read-only pilot — zero data-handling risk.

- Scoped to your **development / vendor AI usage**, not any production PHI system.
- Metadata-only and read-only — nothing for the security review to clear on data flow.
- You walk away with a real number: **attribution coverage** + a **measured forecast accuracy** on your work.

Free during the pilot. We share our SOC 2 timeline and NIST 800-53 control mapping up front.

WHY NOW

Govern the AI spend before it scales.

The cheapest time to put AI on a budget is at the start of the curve — exactly where Maryland is.
